Be prepared with the facts on disaster recovery with Insight’s BC/DR Envisioning Session.

Plan your transition to cloud-based DR with confidence

Every organization should be concerned about potential downtime and losses. A whopping 93% of companies without a disaster recovery plan who experience a major incident are out of business within one year.¹

Clearly, planning for a disaster is critical to long-term business success. Azure® offers a more cost-effective way to solve your Business Continuity (BC) and Disaster Recovery (DR) challenges. Insights’s BC/DR Envisioning Session gives your organization the opportunity to meet with one of our Microsoft® consultants and gather the information you need to make the right decisions regarding your DR strategy.

What will the session cover?

• An overview of BC/DR
• How Microsoft 365™ can help you expand and enhance collaboration
• A deep dive into Azure backup and recovery tools
  • Azure Backup
  • Azure Site Recovery
• Best practices for cloud BC/DR adoption

What will you leave with?

• An understanding of the options available for you to develop or transition your DR strategy to a cloud-based service.
• Clear and defined next steps and services Insight can provide to help your organization transition to a modern solution.

Time commitment

Your customized session will last approximately 90 minutes, which includes 30 minutes of Q&A with a Microsoft expert.

Finding new paths forward in the cloud

The cloud offers a better way for businesses of all types to address the growing needs of customers in a modern digital economy. In fact, organizations overall run 79% of workloads in public or private clouds, including cloud-enabled virtual environments.²

The move away from traditional IT infrastructure will come with a new host of IT constraints and concerns. The right partner can help you maximize the benefits of the cloud and get you up and running quickly.
