Jump start your Teams implementation

Improving communication and collaboration across your organization isn’t just a key part of ensuring employee engagement — it’s critical for operating in today’s competitive environment. The Microsoft 365™ suite, including Microsoft Teams,® equips your workforce to leverage the power of the cloud to drive communication, collaboration and key business outcomes.

In a Microsoft Teams JumpStart, our expert consultants will help your team evaluate organizational needs, develop a transition plan and implement the rollout of Microsoft Teams quickly and efficiently, whether you’re switching from Skype® or need a greenfield deployment.

What is a JumpStart?
Insight JumpStarts are on-site, expert-led workshops that combine training and implementation. Centered around best practices for cloud and security, JumpStarts familiarize your team with new technology and provide you with a working environment you can begin using right away.

How does the JumpStart work?
1. Our Microsoft experts educate your organization on what Teams can do for you and identify best practices for both users and administrators.
2. Through whiteboarding sessions, we design your Teams pilot environment and discuss configuration options to optimize features.
3. We configure and deploy Teams to a test group, identifying wins and areas to improve in follow-up sessions.
4. Based on results and insights from the pilot environment, we develop an actionable roadmap for full deployment of Teams.

The result
Your team gains a clear understanding of the collaboration tools within Microsoft 365 and Microsoft Teams, and a secure environment to begin your Teams rollout.
