

Quickly Troubleshoot and Fix Connectivity Issues

Reliance on Cellular Networks Requires the Right Tools

Cellular data networks have become an integral part of the network infrastructure that companies rely on. However, unlike an internal, corporate network, cellular networks have limited tools available for gathering any type of real data on their performance.

There is an increasing dependence on wireless connections to run mission-critical operation, but without any empirical data on what mobile workers are experiencing in the field, IT and support groups are forced to rely on manually-intensive and often unreliable drive tests, carrier reports, or other homegrown solutions to troubleshoot connectivity issues. At the same time, the secure and reliable transmission of critical data is a much larger concern with public cellular networks. Threats of malware, dropped connections, and compromised bandwidth speeds create unique challenges for any organization.

Eliminate the Guesswork and Reduce Support Costs

There is a solution. NetMotion Wireless Locality™ is cellular network performance management software that gathers real field data to help organizations make informed business decisions on their wireless investments, reduce support costs, boost mobile worker productivity, and proactively optimize their mobile data deployments. Offered either as a Software as a Service (SaaS) solution with subscription-based pricing (Locality Cloud), or as an on-premises solution, It is the first and only software that measures and monitors the cellular networks and devices within your mobile deployment.

Operate at the Highest Productivity and the Lowest Cost

Locality places a small agent on deployed devices to consistently monitor and report back performance information to the Locality server. This allows you to gather real data – including network *and* device performance – on what your mobile field workers are actually experiencing.

With this visibility, you can improve productivity and save costs by:

- Identifying the causes of chronic connectivity problems
- Ensuring your field workers have access to the best coverage and the fastest network technologies
- Redeploying or disconnecting under-utilized devices

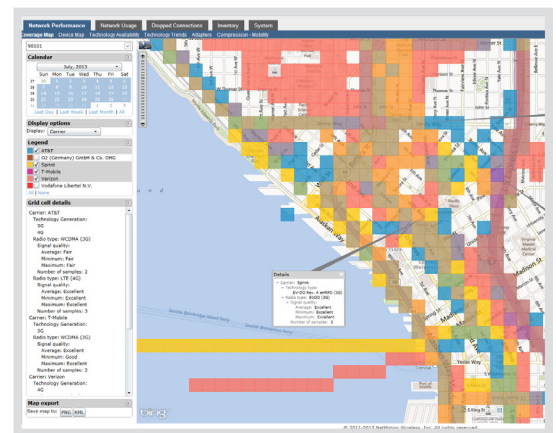

Centralized Control for Optimizing Performance

Locality offers a set of performance monitoring tools to improve management of wireless deployments.

Network Coverage and Device Maps

Locality is the only software to offer detailed coverage maps based on your users' actual data. There are two types of maps:

- **Network Performance Maps**
Get signal quality and network performance by carrier.
- **Deployed Device Maps**
View detailed location information for an individual device showing signal quality, network technology and dropped connections.

Locality's Network Performance Maps allow you to see signal quality from all devices and carriers.

Robust Reporting Suite

Locality reports provide detailed information about devices, network performance, and usage. Various settings allow you to filter the data in many ways, create custom views, and export information to Microsoft Excel.

- **Get Detailed Information on Network Performance**
View availability of each network technology (2G, 3G, 4G, LTE) and monitor performance trends.
- **Proactively Manage Data Usage to Save Costs**
Review and analyze overall data usage by carrier and by network adapter, helping you save money.
- **Find the Real Cause of Connectivity Issues**
Gather information about dropped connections for all of your mobile devices.
- **Track all of Your Deployed Devices, Automatically**
Maintain a central repository of all mobile devices, with detailed information about each user's device configuration, including phone number, ESN and firmware.

Broad Platform Support

Locality agent supports Windows XP, Windows 7, Windows 8 and Android operating systems. It also gathers inventory report data from a wide range of iOS devices (iOS 6).

Deployment Options to fit Your Unique Systems

Avoid Capital Costs, Get in the Cloud

Locality Cloud is a fully hosted, SaaS solution available on an annual subscription basis. With Locality Cloud so you can:

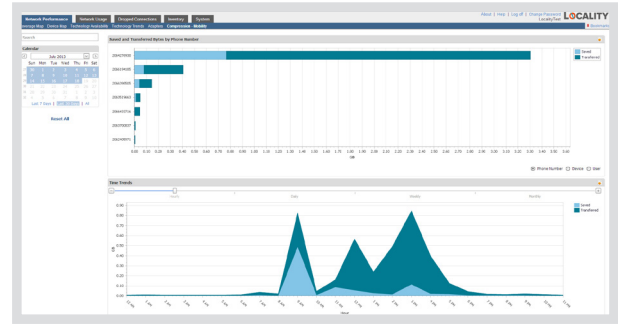

- Avoid capital expenses, hardware costs and maintenance
- Pay by subscription and cancel anytime
- Get up and running quickly
- Scale seamlessly without impacting infrastructure costs

On-Premises Version

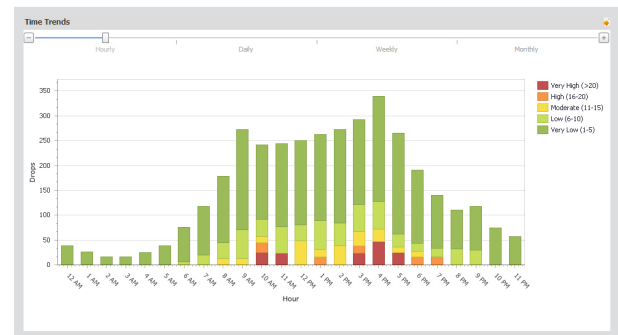

Locality is also offered as on-premises software, installed on hardware owned and managed by your organization. It is easy to install, and requires only one server, making the resource cost to deploy very low. It is invisible to the end user and leverages existing investments in mobile devices and GPS.

LEARN MORE

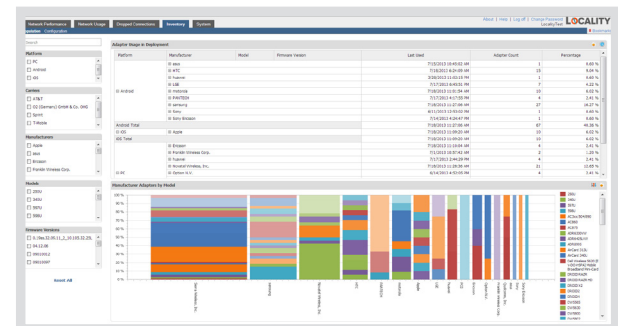

For more information, or to read about NetMotion Wireless software please visit www.NetMotionWireless.com.

When used with Mobility, Locality provides insight into bandwidth usage by application and user.

Dropped Connection Reports identify issues and trends by hardware, user, carrier, and adapter configuration.

Locality's Inventory Report gives you a snapshot of all deployed devices, including firmware and assigned user.
